2 x Powercon True1 (IP65)
2 x Wheelboard-01
2 x loudspeaker poles

OPTIONAL ACCESSORIES:

› Stands

› Weather Protection Covers

Light in weight but heavy in performance, Outline's V15 kit is a serious (and seriously powerful) portable PA system that will easily handle any kind of live or recorded material and deliver pure, uncoloured audio to a large area. Despite its remarkable potential, it will also fit comfortably into a large estate car or small van.

Including two SUB 118-SP12 subwoofers and two Vegas 15 full-range enclosures, V15's components are all engineered to the same strict standards as our premium touring systems, using top-class materials and components.

Like all our V-Series kits, V15 is very cost-effective especially when taking its remarkable power and audio fidelity into account. It is also very easy to configure, thanks to the high-power, Class D amplifiers built into the dedicated subwoofers, simplified cabling and included accessories.

FEATURES

Peak power handling of 12kW (12,000 watts) with a maximum SPL of 144 dB*, enough to deal with anything you can throw at it!

True 'Plug And Play' - with no external power amplifiers or processing and minimal cabling, V15 can be ready to use in a matter of minutes and is also easy to move and store

All enclosures made of the same top-grade birch ply that we use for our top-line professional touring systems

'Common Voicing' allows V15 to work easily with other Outline systems if necessary

The V15 Kit includes a full range of accessories including two Neutrik Speakon speaker cables, two Neutrik Powercon power cables, two wheel boards for the subwoofers and two speaker poles. Weatherproof covers and alternative stands are available as optional extras

100% designed and manufactured in Italy, like all Outline products!
